

Exercise 3: Assertions in JUnit

Calculator.java

```
package org.example;
```

```
public class Calculator {
```

```
    public int add(int a, int b) {  
        return a + b;  
    }
```

```
    public int subtract(int a, int b) {  
        return a - b;  
    }
```

```
    public boolean isPositive(int n) {  
        return n > 0;  
    }  
}
```

CalculatorTest.java

```
package org.example;
```

```
import org.junit.jupiter.api.Test;
```

```
import static org.junit.jupiter.api.Assertions.*;
```

```
public class CalculatorTest {
```

```
    Calculator calculator = new Calculator();
```

```
    @Test
```

```
    void testAdd() {
```

```
    assertEquals(5, calculator.add(2, 3));  
}
```

```
@Test  
void testSubtract() {  
    assertEquals(2, calculator.subtract(5, 3));  
}
```

```
@Test  
void testIsPositive() {  
    assertTrue(calculator.isPositive(10));  
    assertFalse(calculator.isPositive(-5));  
}
```

```
@Test  
void testNull() {  
    String str = null;  
    assertNull(str);  
}
```

```
@Test  
void testNotNull() {  
    String str = "JUnit";  
    assertNotNull(str);  
}  
}
```
